# Case Pack Labels

04/09/2025 12:47 pm CDT

Overview

Case pack labels are typically used in inventory management and order fulfillment to identify items that are packaged together in a single case. These labels indicate the number of items in the case and other relevant information, such as product barcode, or description. By using case pack labels, you can quickly and accurately pick and pack multiple items simultaneously, streamlining your order fulfillment process.

Print Case Pack Labels

Skustack will check if the Purchase Order is marked as a **Case pack** and allow you to use the related label type. The **Case pack** label can be used throughout Skustack to increase the pick quantity by the case instead of a single unit. You can print a case pack label in one of two ways:

From the Receive PO module

1. In the **Receive PO** module, open a PO from the list and swipe the product to the left. Tap the **Labels** icon.
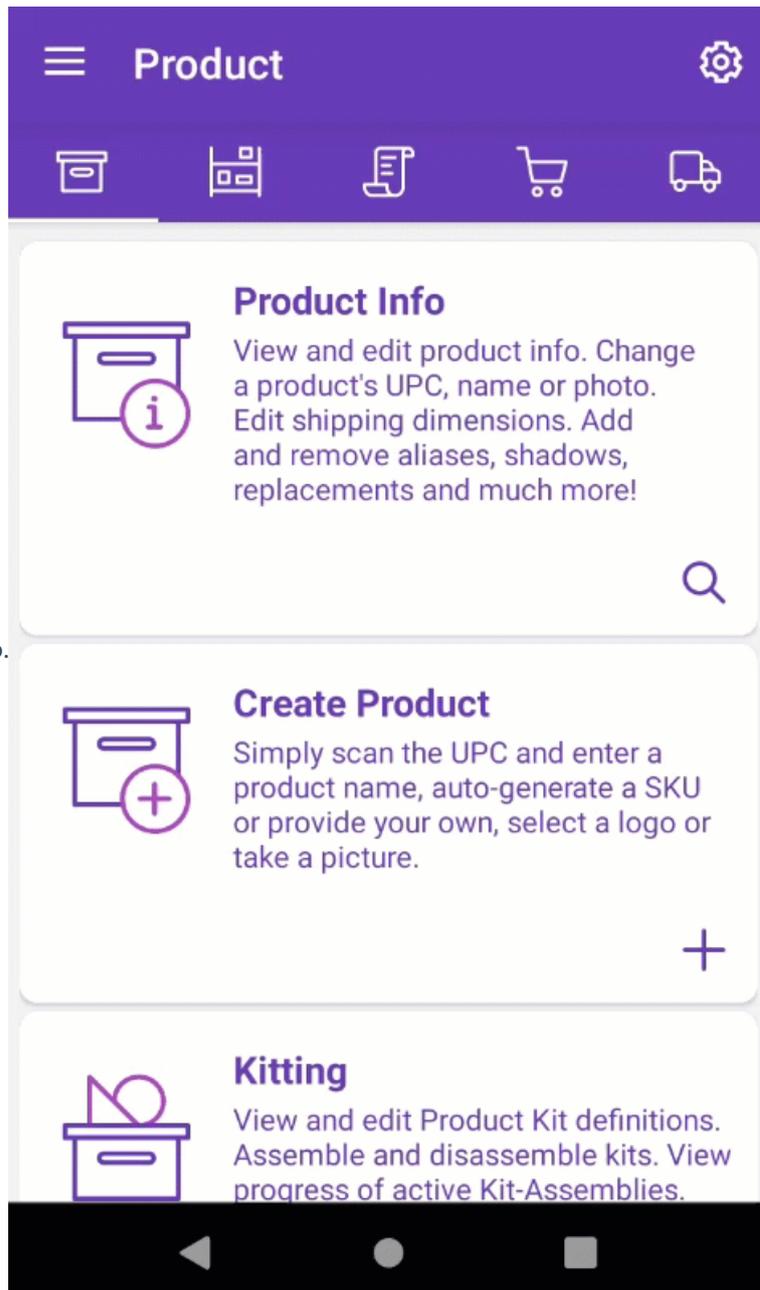

2. POs marked as Case Pack will only have the Case Pack label type available.

3. POs not marked as Case Pack will display the label types as seen below:

The number of Case Pack Labels that are printed will equal the number of cases for that product.

From the Product Info module

1. In the **Product Info** module, tap the **Search** icon.

2. A pop-up window will display.

3. Scan or manually enter the desired product.

4. Tap **Case Pack Info**.

Product Info

View and edit product info. Change a product's UPC, name or photo. Edit shipping dimensions. Add and remove aliases, shadows, replacements and much more!

Create Product

Simply scan the UPC and enter a product name, auto-generate a SKU or provide your own, select a logo or take a picture.

Kitting

View and edit Product Kit definitions. Assemble and disassemble kits. View progress of active Kit-Assemblies.

5. Adjust the **Qty Per Case** as needed.
