

# FBA Prep Module

04/09/2025 12:47 pm CDT

## Overview

Proper FBA preparation helps ensure that your products meet Amazon's requirements and are ready to be shipped to their fulfillment centers. This preparation typically involves applying the required Amazon FBA labels, including the FNSKU (Fulfillment Network Stock Keeping Unit) and barcode, which help Amazon track and easily identify the products.

In this article, you will learn how to effortlessly prepare FBA labels. To learn more about preparing FBA quantities and packaging, refer to [this article](#).

---

## FBA Prep Module

The **FBA Prep** module within Skustack's **Fulfillment** tab allows you to seamlessly scan an item's UPC and immediately print the Amazon barcode that needs to go on top.

1. In the **FBA Prep** module, tap the **Search** icon.
2. A pop-up window will display.
3. Scan or manually enter the desired **SKU/UPC**.
4. The product and its corresponding shadows will load.
5. Select an SKU to print FBA labels for.
6. Enter the desired number of copies and tap **Print**.

### FBA Removals

Scan the FBA Removal's tracking number to receive it into your Warehouse.

### FBA Prep

Scan a SKU/UPC and bring up a list of shadows. Select a shadow to print FBA Labels easily and efficiently.

### WFS Picking

View and Pick your WFS shipment. See which products/packages need to be picked and which have already been picked.
