Inventory Transfer Tab Overview

04/09/2025 12:47 pm CDT

Overview

Transfers are a key aspect of managing inventory in any warehouse or distribution center. Whether you need to move inventory between warehouses, consolidate inventory from one SKU to another, or put away received inventory, it is essential to have efficient and accurate transfer workflows in place. This article provides an overview of the four different types of inventory transfers located within Skustack's **Transfer** tab.

Access the Transfer Tab Modules

The **Transfer** tab has 4 sub-modules:

- Put Away – Transfers from the temporary receiving bin to the putaway bin so that it can be sorted into its proper bin.
  The warehouse you have selected must be bin-enabled to view this module.
- Warehouse To Warehouse Transfer – Transfers inventory between warehouses.
- One Way Transfer – Receives multiple items/units into bins, or removes them from bins by grouping them together.
- Sku To Sku Transfer – Transfers inventory between product SKUs.

PutAway

Transfer between bins to put away inventory. Create a PutAwayList, see the list of products needed to be PutAway based on the PutAway list, and track the progress of how many you put away.

+ 🔍

Warehouse To Warehouse Transfer

Transfer inventory between two warehouses. Create a transfer request, pick and ship products on that request. Receive those products into your warehouse when they arrive.
