Movement Details

Each movement is displayed on a separate row and contains a timestamp, the **activity type**, and the user who performed it.

Depending on the movement type, additional unique details will be displayed:

- **Order Shipped** movements display the shipped SKU, the respective amount, and an order ID. Click on an **Order #** to view its timeline and details in a **Global Search** popup. To open the order or the product in the Skustack Admin, click the **shortcut** next to the order ID, or the SKU hyperlink.
- **Picking** movements, on the other hand, display the picked SKU, the respective amount, the picklist ID, and the to and from bins. Click on a **Picklist ID** to view its status and details in a **Global Search** popup. To open the picklist or the product in the Skustack Admin, use the **shortcut** next to the picklist ID, or the SKU hyperlink. Clicking a bin ID will reveal a **slide-out** displaying its contents. The bin's **View in Visualizer** button leads to the respective Warehouse Floor Planner and highlights the rack containing the bin.
- Movements, such as **RMA** receivals, **WITRs** and **Grading Work Orders** include shortcuts to their respective details in the Skustack Admin.

Two-way activities, such as **Order Picked**, **SKU 2 SKU Transfer**, **One Way Transfer In**, **WITR**, and **Bin Transfer**, are displayed as a single entry in your **Movements** list. In **Insights**, such entries are marked with a rightwards arrow over a leftwards arrow icon, which signifies that the record includes both movement directions.

Download Movements

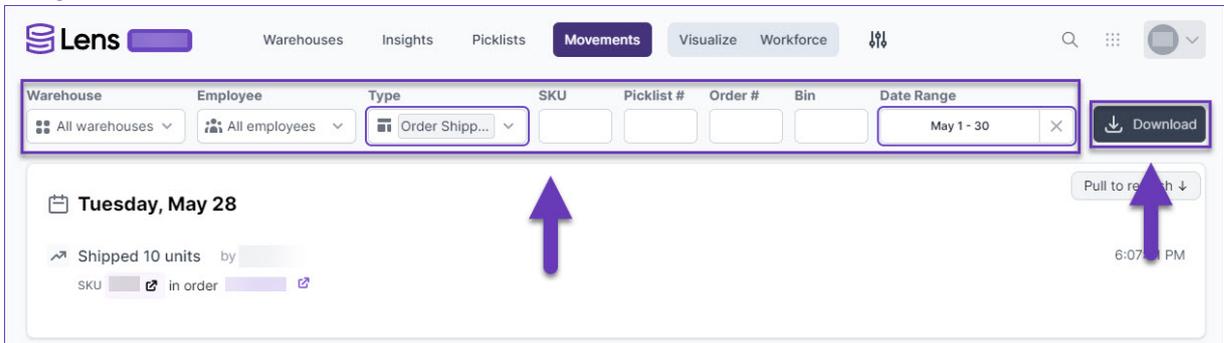

The **Download** function enables you to export a specific list of your Skustack **Movements**, so you can utilize the data for

financial analyses, reporting, accounting, and other business management processes.

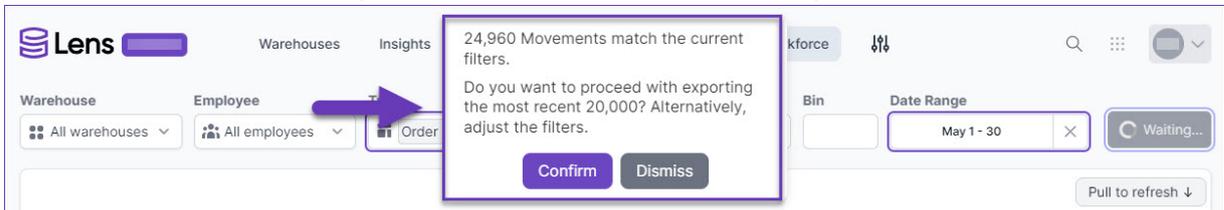

We recommend filtering a specific range of **Movements** (for example by **Type** or **Date Range**) before you initiate the download, as each download file can contain up to 20 000 records.

To **Download** your Skustack **Movements**:

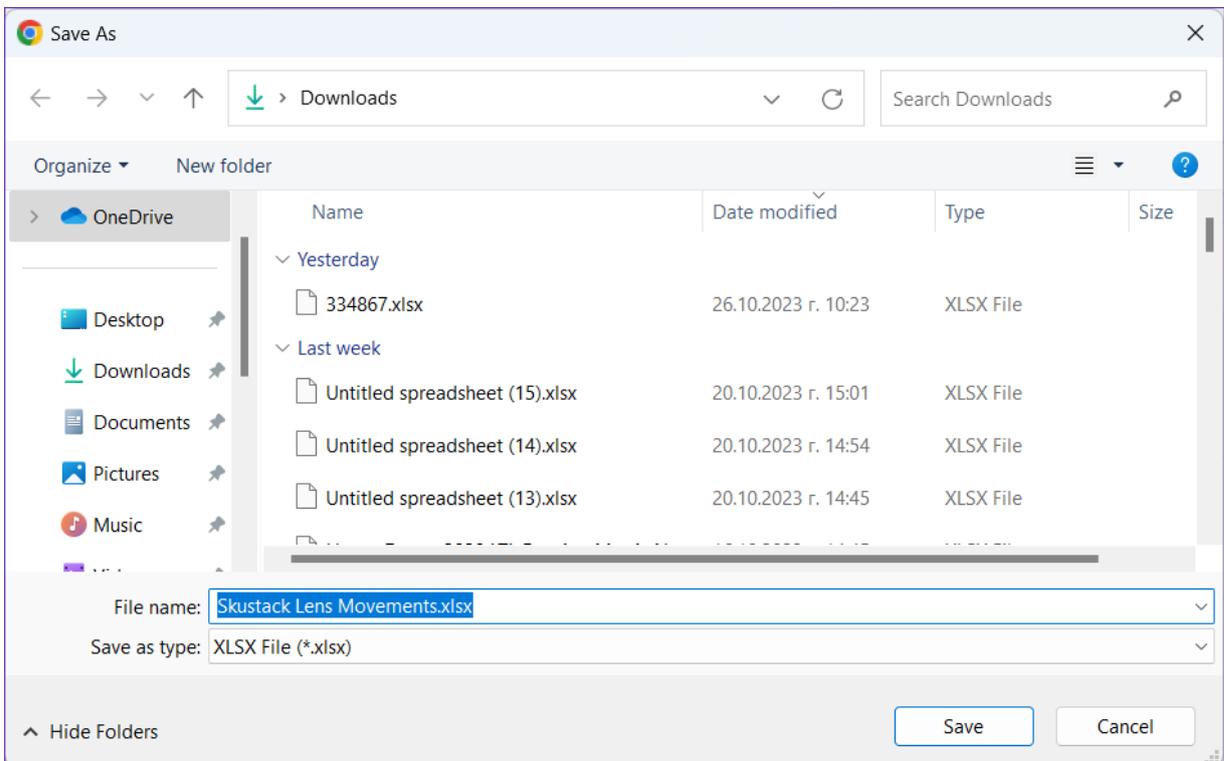

1. Navigate to the **Movements** tab and **Filter** the desired records.

2. Click the **Download** button and a message will appear, asking to **Confirm** or **Dismiss** the download. If the filtered data exceeds 20 000 records and you **Confirm**, the download will contain only the latest 20 000 **Movements**.

3. You can proceed with the rest of your Lens operations and once the export is done, you will see a prompt to choose a location for the download file.

4. When you successfully **Save** the file, you can open it to inspect the data.
