

Weight and Dimensions in Shipbridge

04/30/2025 3:10 pm CDT

Overview

Regardless of which shipping service you choose, the costs associated with shipping a package are directly tied to its size. To ensure accurate shipping charges, it is essential to have precise information about your parcel's weight and dimensions.

In Shipbridge, the weight and dimension fields can be automatically populated with data from your Sellercloud product information. These values can vary depending on your settings configuration and the type of orders you're processing. Alternatively, you have the option to manually input the weight and dimensions in Shipbridge, or read them directly from a [scale](#).

Weight

To automatically recalculate the weight in Shipbridge based on the product/item weight in Sellercloud:

1. Navigate to **Menu > Option > Shipping**.
2. Enable the setting **Always recalculate order weight based on product/item weight**.
 - When the setting is enabled:
 - Single-item orders are pulled from the shipping weight of the product.
 - Multi-item orders calculate the total weight based on the product weight of all the products.
 - When the setting is disabled, Shipbridge will use the **Est. Shipping** weight from the **Shipping Tab** on the **Order Details Page** in Sellercloud.
 - By default, Sellercloud uses the Products' **Shipping Weight** for Single-Item Orders. For Multi-Item Orders, the **Est. Shipping Weight** is calculated based on the **Product Weight**. You can disable the [Client Setting Use Product Weight On Orders For Multi Items Order](#) to use the Shipping Weight of SKUs for both types of orders.

To use the shipping weight of SKUs for both single and multi-item orders, simply disable the [Client Setting Use Product Weight On Orders For Multi Items Order](#).

Options

General Connection Invoice Shipping Batches Customs Carriers Shipsurance Scan and Ship Rates Admin Scale

Automatically set weight to 1 oz when an order is > 0 oz and < 1 oz.

Set default order weight (when 0 oz): Single-item Multi-item orders

Auto-select service (cont.)

Require PIN before shipping orders with order total > \$

Reference fields: Use product name instead of order item description

Silently validate addresses with standard changes (ZIP+4, abbreviations)

When using multiple warehouses, deduct inv qty from proper warehouse (based on location)

Use company first/last names instead of company name

Always recalculate order weight based on product/item weight Recalculate package weight based on order weight

Ignore zero-weight products when calculating package and order weight

Warn when shipping an order with \$0 declared value

Use old package editor code

Only update ShipWeight when saving order/product weights

Allow batch unshipping

Maximum number of orders to batch unship

Only batch unship orders that are days old

Calculate order weight based on kit items

Calculate per-package weight for multi-package orders Use per-package dimensions for multi-package orders (loaded from products)

Use 4x6 collate Fractions: 1/4 1/8

X offset (inches):

Y offset (inches):

Hide the shipper phone number where possible

Include the customer name in the UI order log Include the shipping cost in the UI order log

Add 'Confirm orders' context menu shortcut

Run Configuration Wizard Find setting... Find Next Apply Save Cancel

Dimensions

Dimensions will populate depending on the order type:

1. Single SKU order – will pull from the shipping dimensions of the product.
2. Multi SKU order – will not populate any dimensions.
3. When a [Package Type](#) has been selected, the dimension of the package type can be auto-populated. Navigate **Menu > Options > Shipping**. Enable the setting **Use CWA package type dimensions where available**.

The screenshot shows the 'Options' dialog box with the 'Shipping' tab active. The following options are visible:

- Allow batch unshipping
 - Maximum number of orders to batch unship: 75
 - Only batch unship orders that are: 10 days old
- Calculate order weight based on kit items
- Calculate per-package weight for multi-package orders
 - Use per-package dimensions for multi-package orders (loaded from products)
- Use full Overstock address when overriding Ship From address
- Use 4x6 label for PDF labels printed by API carriers
 - Use 4x6 collate
 - Fractions: 1/4 1/8
- X offset (inches): 0.00
- Y offset (inches): 0.00
- Hide the shipper phone number where possible
- Include the customer name in the UI order log
 - Include the shipping cost in the UI order log
- Add 'Confirm orders' context menu shortcut
- Consider Address Classification from CWA
- After shipping, automatically clear and focus the Order ID filter
- Use per-package signature confirmation (Requires restart)
- If there is only one result in the grid, auto-select "Mark for Shipping"
- Use CWA package type dimensions where available (highlighted)
- Shipped tab: Skip order redownload
- Default grid insurance type: Carrier
- Only allow shipping of orders loaded from picklists
- Require PIN for Delivery and Signature Confirmation changes
- Save declared value back to CWA/database
- Use Warehouse Address (based on Location and Station)

At the bottom, there is a 'Run Configuration Wizard' button, a search field, a 'Find Next' button, and 'Apply', 'Save', and 'Cancel' buttons.

DIM Weights in Rate Calculations

Dimensional weight, also known as volumetric weight, is a pricing technique for commercial freight transport, including courier and postal services.

Dimensional weight, (**DIM**) factors are in a package's length, width, and height when calculating shipping weight rates. This has become important since carriers are more strict about using DIM weight.

To select the option of using DIM weight in rates calculation:

1. In Shipbridge, navigate to **Menu > Options**.
2. Go to the **Rates** tab > select **Use dimensional weight rates**.

Carriers Settings

It is recommended to always include the package dimensions in the shipping label request for every carrier. This ensures accurate shipping charges.

For FedEx, Shipbridge will always include the package dimensions in the request. However, for UPS Web Services and USPS Web Services, you will have to enable the setting **Populate package dimensions in shipping label requests** in the

Shipping Tab.

Options

General Connection Invoice Shipping Batches Customs Carriers Shipment Insurance Scan and Ship Rates Admin Scale

Carrier	Domestic	International
USPS	(!)	(!)

FedEx	FedEx Web Services	FedEx Web Services

Save non-trackable numbers to a separate field

Always prompt after each shipping (not applicable in Scan&Ship)

Use sender's phone when none other is specified

Populate package dimensions in shipping label requests Require dimensions for orders

In Package Manager generate a separate package for each bundle item

Clear Overstock phone number

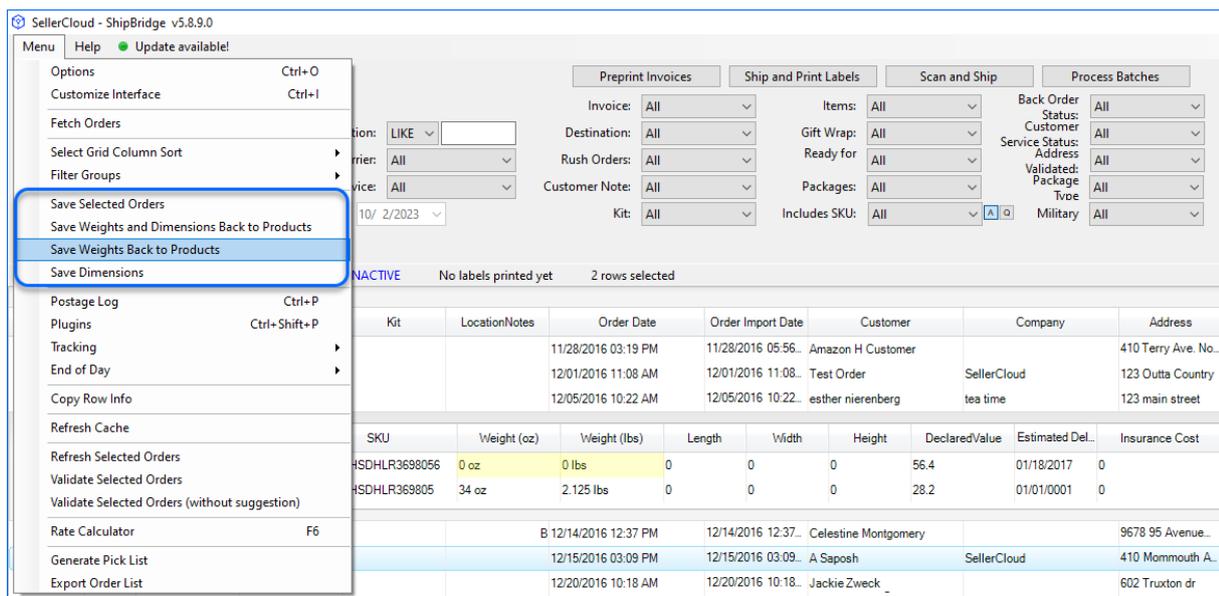

Use Overstock.com return address for all overstock orders Enable shipping label counter

Save Weights and Dimensions Back to Products

You can quickly input the weight and size of a package in Shipbridge and save it back to the product in Sellercloud. This means that when you receive another order for the same item in Shipbridge, it will already have predefined weight and dimensions, negating the need to re-weight and re-measure the package.

1. Enter the weight and dimensions in the order's respective columns in the shipping grid.
2. Repeat for multiple orders.
3. Select the orders, open the Menu, and select the following, when applicable:
 - a. **Save Weights Back To Products.**
 - b. **Save Dimensions.**
 - c. **Save Weights and Dimensions Back to Products.**
4. The shipping weight and shipping dimensions field will be updated on the product's home page.

This action only works for single-item orders. Multi-item and zero-weight orders will be ignored.

Related Settings

Below are the Settings that are related to the Orders' Weight and Dimensions.

Shipbridge Settings

See the following available settings in Shipbridge:

- **Use Product Shipping Preferences (includes CWA Packaging Types)** – When enabled, Shipbridge will use the shipping preferences and packaging types configured on your products when processing orders. [Product Shipping Preferences](#) are configured in Sellercloud.
- **Skip Product Shipping Preferences per Qty (faster)** – If you have [shipping preferences set per qty](#), this setting must be disabled. If you don't use per qty shipping preferences, this setting must be enabled. When enabled, Shipbridge will ignore any per qty product shipping preferences.

- **Apply CWA Packaging for Multi-item Orders** – When enabled, Shipbridge will apply CWA packaging for multi-item orders.
- **Always Recalculate Order Weight Based on Product/Item Weight** – When enabled, this setting will automatically recalculate the weight in Shipbridge based on the product/item weight in Sellercloud.
- **Use CWA Package Type Dimensions Where Available** – This setting will use the dimension of the package size if such is selected for the order.
- **Use Dimensional Weight Rates** – When enabled, it will use DIM Weights in rates calculation.
- **Populate Package Dimensions in Shipping Label Requests** – Enable this setting in order to copy your package dimensions for each carrier.

Client Settings

See the following available Client Settings in Sellercloud:

- **Use Product Weight On Orders For Multi Items Order** – This setting is enabled by default and it will use product weight for multi-item orders. If you want to use the shipping weight for multi-item orders instead, disable the setting.
-
