ConnectShip Account Integration

04/30/2025 3:10 pm CDT

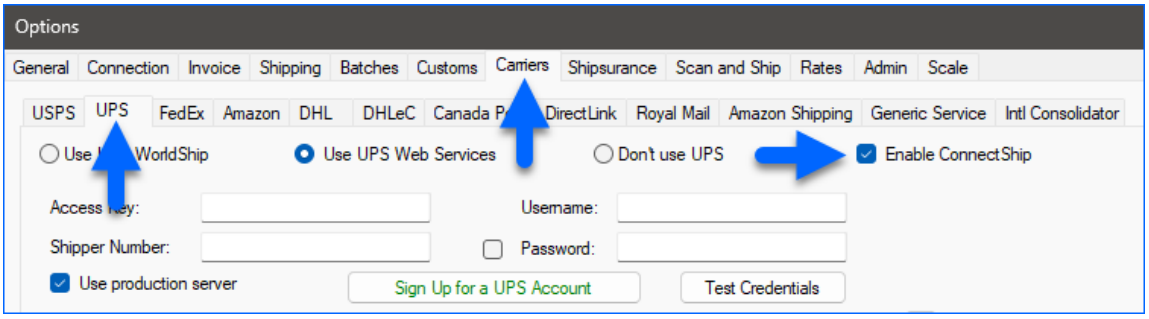
Overview

ConnectShip is an independent subsidiary wholly owned by UPS. ConnectShip primarily offers on and off-premise multi-carrier shipping software and solutions for enterprise and mid-sized companies. Their software is intended to streamline shipping processes, reduce shipping costs, and improve overall efficiency.
Enabling ConnectShip disables all UPS shipping options (except via Amazon) in Shipbridge.

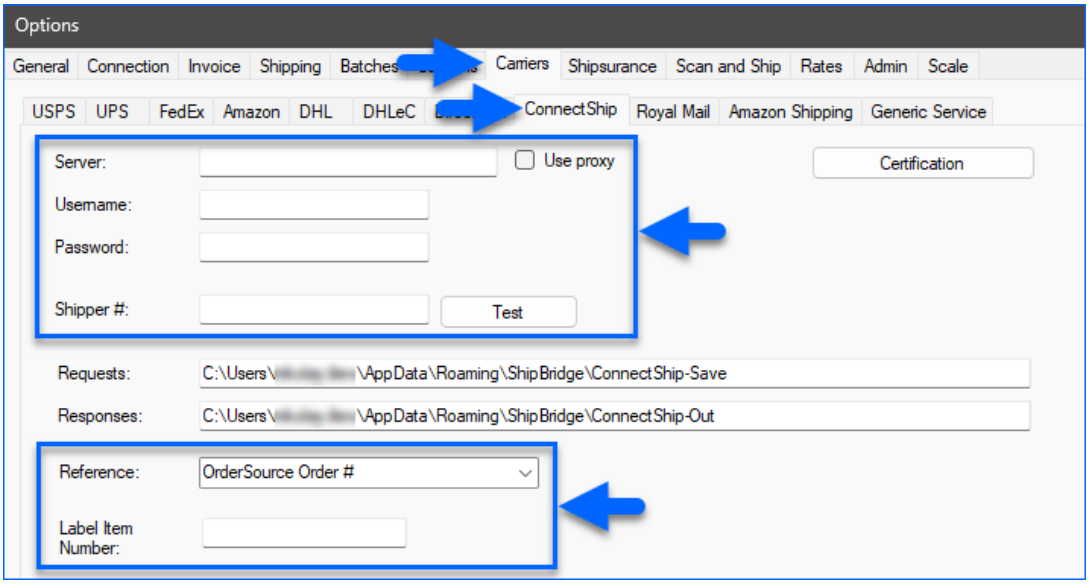
Integrate Connectship with Shipbridge

To integrate your ConnectShip account into Shipbridge:

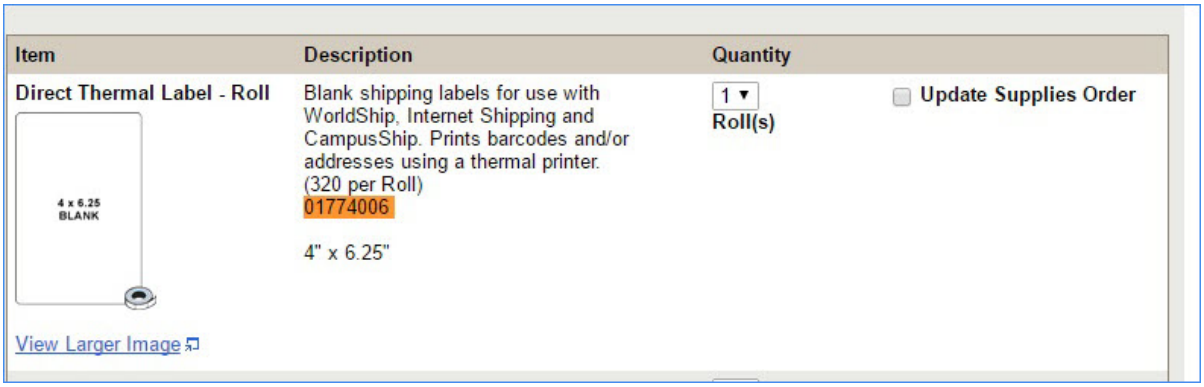
1. In Shipbridge, go to **Menu > Options > Carriers > UPS.**
2. Check the **Enable ConnectShip** box and click **Save**.



3. Restart Shipbridge.
4. Go to **Menu > Options > Carriers > ConnectShip**.
5. Enter the **Server**'s IP address, **Username**, and **Password**. Usually, it's an in-house server, so that would be the local IP address.
6. Enter your UPS account number in the **Shipper #** field.
7. Select a label **Reference** field that can display Sellercloud order info on the label, like the channel order number (**OrderSource Order #**).



8. The **Label Item Number** is the standardized number that references a particular label size. When entered, ConnectShip will print the label accordingly. For example, **01774006** would print a label as in the image below.



9. If your printer is printing from a local PC, configure the label printer with the **Label Printer Configuration** button.

10. If your printer is printing from the ConnectShip server, check **Print to network server (server-side)** and enter the printer path.

11. If you check **Use MultiLabel tag**, when requesting a customs form, it will be printed on a separate label.

12. The **UPS Mail Innovations Cost Center code** can be used as a reference field.

13. Click **Save** when you're done with the setup.
