

Imagebridge

04/30/2025 3:11 pm CDT

Overview

Imagebridge is a user-friendly image-uploading tool integrated with Sellercloud through [Web Services](#).

With Imagebridge you can drag and drop images from your desktop directly onto a product in Sellercloud. Additionally, Imagebridge provides convenient editing functions to enhance your images.

Check out this short tutorial on using Imagebridge to upload images.

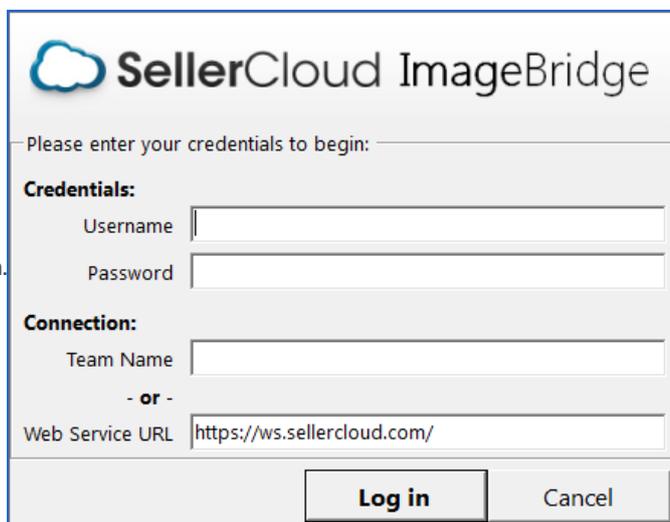

Configure Imagebridge

Imagebridge is **Windows**-based, however, certain programs allow you to run Windows software on a Mac operating system, such as the **Windows emulator for Mac**. Alternative workflows are often discussed by our existing clients in the [Sellercloud Forum](#).

Click [here](#) to download the latest version of Imagebridge on your computer. Next, follow the installation instructions and configure the application.

1. Enter your **Credentials**:
 - Sellercloud **Username** and **Password**
2. Configure your **Connection**:
 - Enter either your **Team Name** or **Web Service URL**.

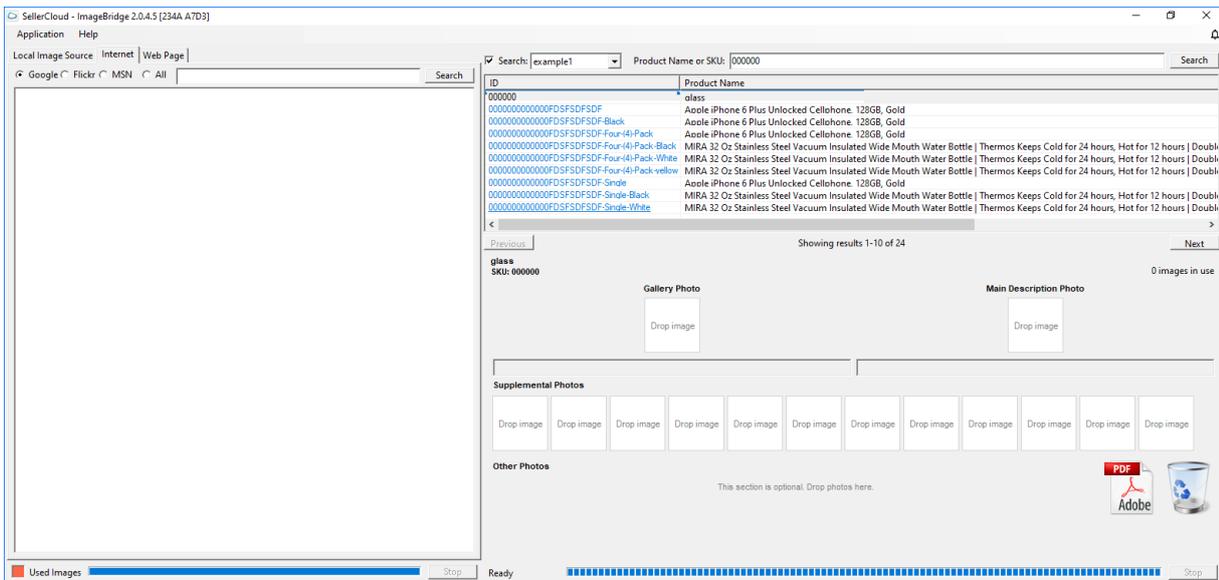

3. Click **Log in**.

The screenshot shows the 'SellerCloud ImageBridge' login window. It features a title bar with the SellerCloud logo and the text 'SellerCloud ImageBridge'. Below the title bar, there is a prompt: 'Please enter your credentials to begin:'. The window is divided into two main sections: 'Credentials' and 'Connection'. The 'Credentials' section has two input fields: 'Username' and 'Password'. The 'Connection' section has two input fields: 'Team Name' and 'Web Service URL'. The 'Web Service URL' field contains the text 'https://ws.sellercloud.com/'. Below the input fields, there are two buttons: 'Log in' and 'Cancel'.

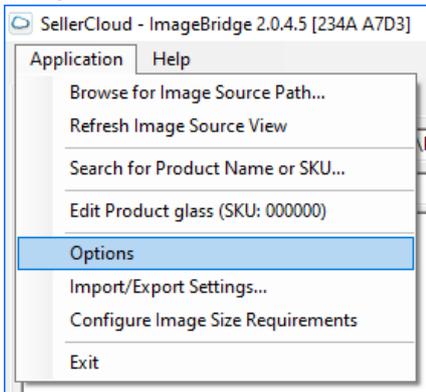

The interface is simple and easy to use. On the left side, you can explore your local image files, retrieve images from various search engines, or directly capture images from any web page. On the right side, you can search for **SKUs** and work with the images.

You can import images either from a **local folder on your computer** or a **Web Page**.

Application Options

Navigate to **Application > Options**. This panel provides you with the following settings:

- **Connect to** – Web Service/Magento Service
- **Image Source Path** – Refers to the location on your computer where the image file is stored.
- **Recycle Bin Storage** – Select where your deleted images will be stored.
- **Credentials** – Your Sellercloud account’s username and password.
- **Connection** – Connection details.
- **Open links in Delta instead of Alpha** – Enable this to open all links in our Delta interface automatically.
- **Enable FTP image Source tab** – Enable this setting to be able to import images from an FTP server.
- **Disable image highlighting** – Enable this option to remove any image highlighting.
- **Ask for confirmation when deleting images** – Enable this setting to require users to confirm their actions before deleting images.
- **Automatically assign Default image as Main Description** – Enable this setting to automatically assign the Default image as the Main Description image.
- **Path to tiffjunction.exe** – Enter your tiffjunction path. TIFF Junction has an advanced OCR engine that converts TIFF images into PDFs with searchable text.

- **Test Connection** – Test your server connection.

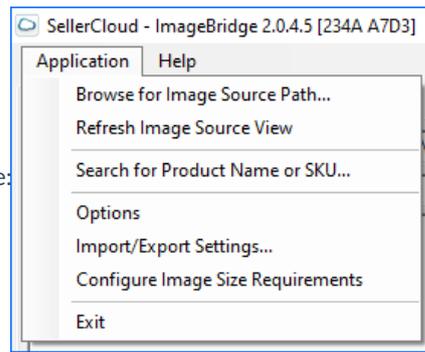

Import and Export Settings

Navigate to **Application > Import/Export Settings**. The Import/Export Settings panel provides you with the following settings:

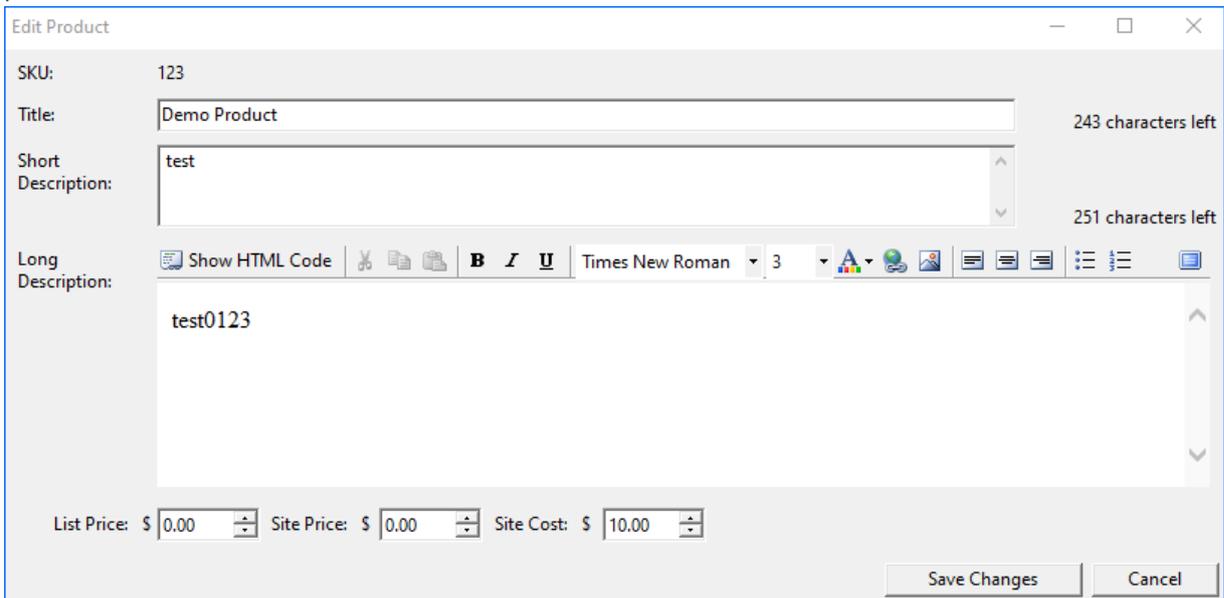

- **Information**
 - Select whether you want to **Export settings from this installation** or if you'd like to **Import settings from another installation**. If you select to import settings from another installation, you need to select an existing **.settings** file from your computer.
- **Export Settings**
 - Select where to export the settings file on your computer.
- **Import Settings**
 - Select an existing **.settings** file to import from your computer.

Other Options

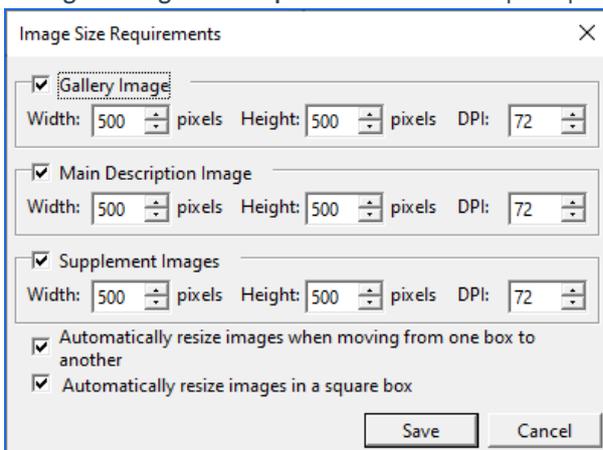

Other available options are:

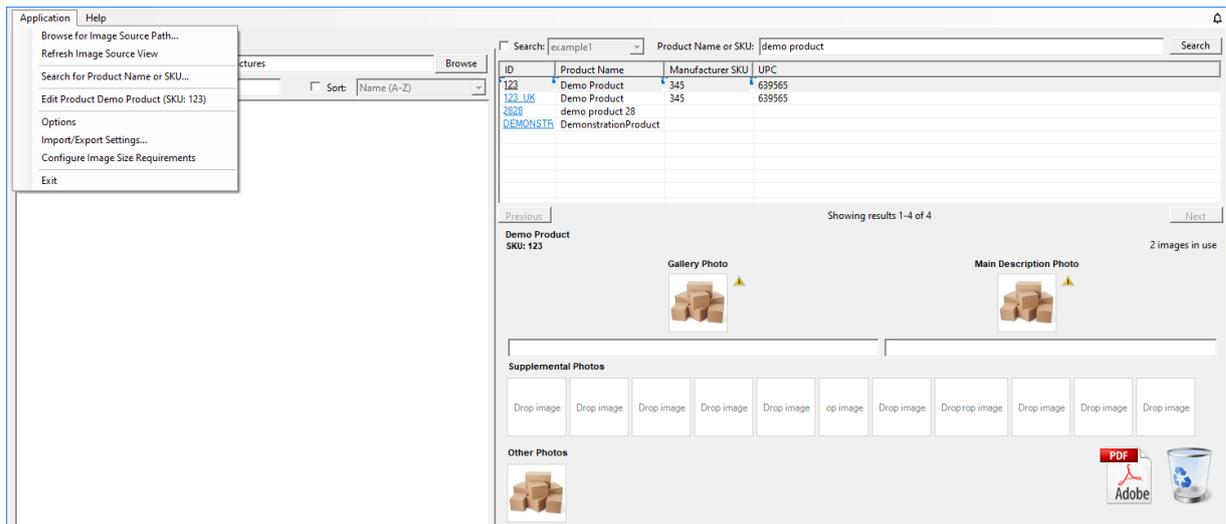

- **Browse for Image Source Path** – Select the Image Source Path on your computer.
- **Refresh Image Source View** – Refresh Images.
- **Search for Product Name or SKU** – Search for your products on the right side of the application.
- **Edit (Product Name)** – This will open a panel, where you can edit your product title, short and long description, and price details.

- **Options** – Refer to the Application Options section above for a detailed explanation of each option.
- **Import/Export Settings** – Refer to the section below to learn more about the Import and Export options.
- **Configure Image Size Requirements** – This will open a panel where you can configure your image size requirements.

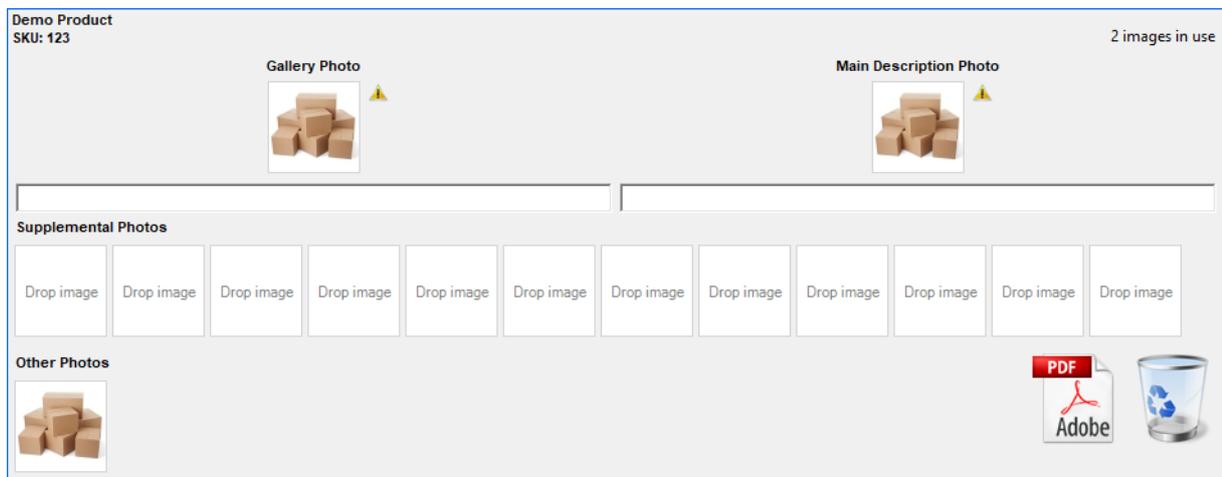

- **Exit** – Exit the application.

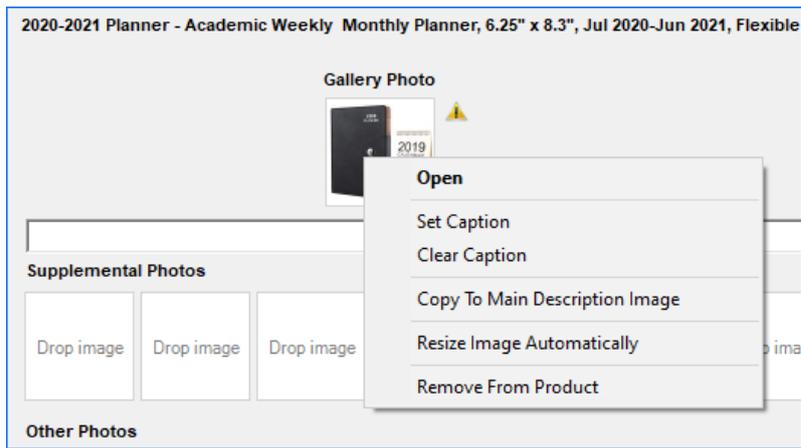

Edit Images

Once you search for a product, on the right side of Imagebridge, you can see its **Gallery Photo**, **Main Description Photo**, or all **Supplemental Images**. You have the option to import or delete an image. You can also see how many images are currently in use. In the grid, you will see the image **ID**, associated product's **Name**, **UPC**, and **Manufacturer SKU**. A yellow triangle icon next to your image indicates that the image does not meet the size requirements. Right-click on the icon to resize it and resolve the issue.

Right-click on the image to configure the following:

- **Set Caption** – Apply image caption.
- **Clear Caption** – This option will clear the set image caption.
- **Copy To Main Description Image** – This option will replace the main description photo.
- **Resize Image Automatically** – This option will resize the image to fit the set size requirements.
- **Remove from Product** – Remove the image from the product.

Once you select the image, on the right side of the application you can see its address and you have the option to **Crop**, **Edit**, and **Watermark**.

Click on **Edit**, to see and alter your image properties, such as **Width** and **Height**, **Brightness** and **Contrast**, **Color Temperature**, **Rotation** configuration, resizing to a **square format**, and selecting a **white background**.
