

FBA Hazardous Material Policy

04/30/2025 3:19 pm CDT

Overview

FBA Hazardous Material Policy refers to the rules and guidelines that merchants must adhere to when selling FBA products classified by the US Department of Transportation as **Hazmat** (hazardous materials). FBA sellers are required to identify and regulate such products that pose a potential risk to health, safety, property, or the environment, in order to sell them safely with Fulfilled By Amazon services.

Learn how to [manage your compliance and dangerous goods classifications](#) on Amazon.

All sellers who wish to send dangerous goods to Amazon's fulfillment centers must follow the [FBA dangerous goods review process](#) to assess product eligibility.

Hazmat Products

Hazmat products are usually goods made with toxic, or flammable parts, which could be dangerous to store and transport, such as lithium battery-operated products, items with powerful magnets, aerosols and compressed gasses, etc. There are **Hazmat Product Classes** that are **Permitted** for FBA sale with Amazon's approval, and there are products **Prohibited** for FBA sale.

Permitted FBA Product Classes

Under specific conditions, Amazon allows FBA merchants to sell the following hazardous product classes:

- Flammable solids, liquids, and gasses.
- Non-flammable and non-toxic gasses.
- Oxidizers and organic peroxides.
- Toxic and corrosive substances.
- Miscellaneous dangerous substances, such as lithium batteries and magnetized materials.

Prohibited FBA Product Classes

The following material classes are prohibited for FBA sales:

- Explosive substances and toxic gasses.
- Substances that are dangerous when wet, or liable to spontaneous combustion.
- Infectious substances and radioactive materials.

Products that contain these materials could be harmful when stored or used improperly.

Always adhere to [Amazon's dangerous goods classifications](#) and [FBA dangerous goods review process](#) to sell your FBA products. If you have any doubts, contact [Amazon Support](#).

Mark Product as Hazmat

To identify a product as **Hazmat** in Sellercloud:

1. Navigate to **Catalog > Manage Catalog** > open the desired product.
2. From the product's **Toolbox**, select **Amazon**.

3. Click **Edit**.
4. In the product's **Listing Details** panel, check the box **Is Hazmat**.
5. **Save** your changes.

The screenshot shows the Amazon Seller Central interface for editing a product listing. The 'Listing Details' panel on the right contains the following fields:

- Product Title: 251 chars left
- Boza
- Amazon Title: 255 chars left
- Amazon Description: 0 chars
- Item Type
- Top Category: Select
- Sub Category: Select
- Configure Attributes:
- Search Term 1
- Bullet Point 1
- Brand: Select
- Tax Code
- Condition: New
- Is Hazmat: (highlighted with a blue box and a blue arrow)
- Pesticide Properties

The 'Edit' button in the top right corner is also highlighted with a blue box.

You can also update the **Hazmat** field of your products in bulk via a file import. Use the column **Is Hazmat** with the **Bulk Update Tool**. The accepted values are **True** and **False**.
