# Copy and Clone SKUs

04/30/2025 3:20 pm CDT

Overview

With Sellercloud you can easily **Copy Product Data to Other SKU(s)** and **Clone** existing products. To **Copy Product Data to Other SKU(s)** means to transfer its product information to another existing SKU. On the other hand, the action to **Clone** an existing product will create a new identical item in Sellercloud, with a new SKU defined by you.

By default, copied and cloned SKUs do not retain any product relationship from the original SKU. To learn how to retain shadow and kit relationships on copied and cloned SKUs, refer to the Related Client Settings section.

Copy Product Data to Other SKU(s)

To **Copy Product Data to Other SKU(s)**:

1. Navigate to **Catalog** > **Manage Catalog**.

2. Select the product you want to copy the data from.

3. Select the **Copy Product Data to Other SKU(s)** option from the **Action** menu.

4. In the **Product(s) To Copy To** box, type the existing product SKU(s) where the copied data will appear.

5. Optionally, select **Copy ASIN** and **Copy UPC**.

6. Click **Submit**.

7. The products will be updated automatically.

Clone a Product

Sellercloud allows you to select a few different parameters when you **Clone** an SKU – you can assign the **Fulfilled by** and Kit **Dependency Option** for the new product. However, cloning an item will not replicate certain key information, such as inventory, cost, and price. This is to ensure that those values have been updated correctly before you post a clone to a channel. You can clone N-Matrixes (variations), but the cloned SKU will not retain the variations configuration.

To **Clone** product(s):

1. Navigate to **Catalog** > **Manage Catalog**.

2. Check the product(s) you want to clone.

3. Select the **Clone SKU** option from the **Action** menu.

4. In the **Clone Products** pop-up, add a **New SKU** ID for each item.

5. Adjust other parameters to be cloned into the new product(s):

   a. **Company** – The company the clone will be added to.

   b. **Fulfilled By** – The clone's fulfillment method.

   c. **Copy UPC** – Check to replicate UPC.

   d. **Copy ASIN** – Check to replicate ASIN.

   e. **Copy Vendor Prices** – Check to replicate all Vendor Prices of the original SKU.

   f. **Dependency Options** – The clone's kit dependency.

CLONE PRODUCTS

	NEW SKU	COMPANY	FULFILLED BY	COPY UPC	COPY ASIN	COPY VENDOR PRICES	DEPENDENCY OPTION
		[___] ▾	Merchant ▾	☐	☐	☐	Independant ▾

CANCEL   CLONE SKUS

6. Click **Clone SKUs**.

7. New product(s) will appear in your **Catalog**. The **Change Log** of each cloned item will record the product as a clone and will log the originating SKU.

Import Clones in Bulk

Clones can be created in bulk through a products import file:

1. Navigate to **Catalog** > **Tools** > **Import Product Info**.

2. Select **Import Product Clones**.

3. Create your own template or download one directly from Sellercloud – click the **Download** icon to save a template.

4. Populate the following file columns with the relevant information:

- **ProductID** – Existing SKU that you want to clone.

- **ClonedProductID** – Desired SKU of the newly created clone.

- **CompanyID** – The numerical ID of the company the clone will be added to.

- **FulfilledBy** – Select **Amazon** to create the clone as an FBA product. Select **Merchant** to create the clone as an FBM product.

- **CopyUPC** – If you want to copy the originating product's UPC to the clone, put **True**. Otherwise, insert value **False,** or leave the field blank.

- **CopyASIN** – To copy the ASIN from an existing item to a clone, put **True**. Otherwise, insert value **False,** or leave the
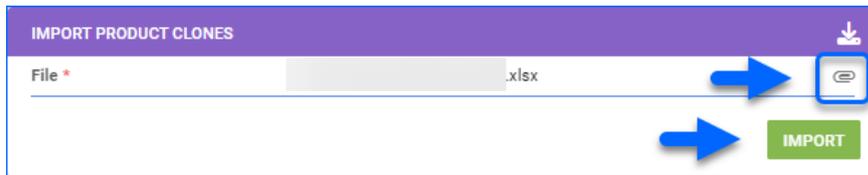

field blank.

- **CopyVendorPrices** – Set ti **True** to replicate all Vendor Prices of the original SKU.

- **DependencyOption** – Define the clone's kit type – either **Independent**, **All Components**, or **Main Component**.

5. Save your file.

6. Return to the **Import Product Clones** panel and click the **Upload** icon.

7. Select the appropriate file from your computer, and click **Import**.

You generated a Queued job, which can be reviewed on your Manage Queued Job page. Once its status is **Completed**, the cloned SKUs will be available for further modifications.
In case of unsuccessful cloning, you'll see an error message in the Queued job Change Log.

Related Client Settings

Sellercloud enables you to configure your **Client Settings**, to define which data to be replicated each time you **Clone** or **Copy** a product. To manage these configurations:

1. Navigate to **Settings** > **Client Settings** > **General Client Settings**.

2. Turn on the **Advanced** toggle, to display all settings.

3. Configure the following options:

- **Enable Images Copy On Shadow Product Clone** – Select to copy over images when you clone an SKU. Applicable for shadow products.

- **Enable images copy on product clone (simple)** – Check to copy over images when you clone an SKU. Applicable for regular SKUs.

- **Enable UPC Copy On Product Clone (Simple)** – When enabled, Sellercloud always copies over the UPC to the cloned SKU.

- **Persist Shadow Of When Cloning Products** – Replicates the shadow relationship to the cloned SKU.

- **Enable Title Copy On Product Clone (Simple)** – Copies the product's eBay title(s) to the cloned SKU.

- **Do Not Copy Product Specifics When Cloning Product** – Check to disable the replication of eBay item specifics.

- **Set Web Enabled When Cloning SKU** – Switches the **Web Enabled** option ON when cloning an SKU.

- **Copy kit properties on product clone** – Replicates kit properties to the cloned SKU.

- **Do not clone Sears properties when cloning Product** – Check to exclude Sears properties, when you clone a product.

- **Copy Custom Columns When Cloning Product** – Enable to replicate the product's custom columns to the cloned SKU.

- **Default Company for Cloning Products** – From the dropdown menu choose a default company for your clones.

- **Keep channel active status on Shadow clone** – Check to copy over the channel-enabled statuses for cloned products (eBay enabled, Amazon enabled, etc.).
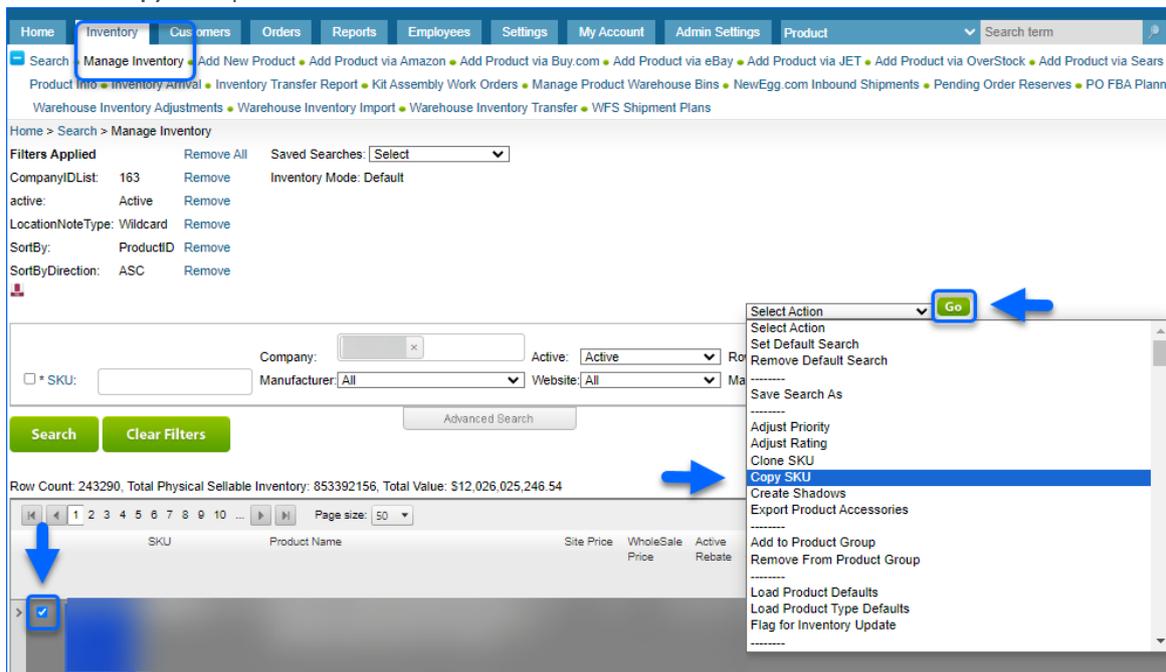

4. **Save** your changes.

Overview

With Sellercloud you can easily **Copy** and **Clone** existing products. To **Copy** an SKU means to transfer its product information to another existing SKU. On the other hand, the action to **Clone** an existing product will create a new identical item in Sellercloud, with a new SKU defined by you.

By default, copied and cloned SKUs do not retain any product relationship from the original SKU. To learn how to retain shadow and kit relationships on copied and cloned SKUs, refer to the Related Client Settings section.

Copy a Product

To **Copy** specific data from one product to another:

1. Navigate to **Inventory** > **Manage Inventory**.

2. Select the product you want to copy the data from.

3. Select the **Copy SKU** option from the **Select Action** menu and click **Go**.

4. In the **Copy SKU** page:

   a. Type the existing product SKU(s) where the copied data will appear in the **Search For** box, or in the **SKU list** textbox.

   b. Click **Search** or **Search SKUs** button.

   c. Check the desired SKUs and adjust what parameters to be copied to them.

d. Click **Submit**.

Clone a Product

When you **Clone** an SKU, Sellercloud allows you to select the Fulfilled by method for the new product. However, cloning an item will not replicate certain key information, such as inventory, cost, and price. This is to ensure that those values have been updated correctly before you post a clone to a channel.

You can clone N-Matrixes (variations), but the cloned SKU will not retain the variations configuration.

To **Clone** product(s):

1. Navigate to **Inventory** > **Manage Inventory**.

2. Search for the product(s) that you want to clone and check them.

3. Choose the **Clone SKU** option from the **Select Action** dropdown and click **Go**.

4. Type in a new SKU for each item in the respective **Clone SKU** box.

5. Adjust other parameters to be cloned into the new product(s):

   a. **Company** – The company the clone will be added to.

   b. **FulfilledBy** – The clone's fulfillment method.

      c. **Copy UPC** – Check to replicate UPC.

      d. **Copy ASIN** – Check to replicate ASIN.

6. Click **Continue Clone**.

7. New product(s) will appear in your **Catalog**. The **History** of each cloned item will record the product as a clone and will log the originating SKU.

Import Clones in Bulk

Clones can be created in bulk through a products import file:

1. Navigate to **Inventory** > **Import Product Info** > **Import Cloned Products**.

2. Create your own template or click **Download template**.

3. Populate the following file columns with the relevant information:

      a. **ProductID** – Existing SKU that you want to clone.

      b. **ClonedProductID** – Desired SKU of the newly created clone.

      c. **CompanyID** – Numerical ID of the company the clone will be added to.

      d. **FulfilledBy** – Select **Amazon** to create the clone as an FBA product. Select **Merchant** to create the clone as an FBM product.

      e. **CopyUPC** – If you want to copy the originating product's UPC to the clone, put **True**. Otherwise insert value **False,** or leave the field blank.

      f. **CopyASIN** – To copy the ASIN from an existing item to a clone, put **True**. Otherwise insert value **False,** or leave the field blank.

      g. **DependencyOption** – Define the clone's kit type – either **Independent**, **All Components**, or **Main Component**.

4. Save your file.

5. Return to the **Import Product Clones** panel and click the **Choose File** button.

6. Select the appropriate file from your computer, and click **Import Products to Clone.**

You generated a Queued job, which can be reviewed on your Manage Queued Job page. Once its status is **Completed**, the cloned SKUs will be available for further modifications.

In case of a unsuccessful cloning, you'll see an error message in the Queued job Change Log.
