

Inventory Max Quantity

04/30/2025 3:21 pm CDT

Overview

Sellercloud's **Inventory Max Quantity** option allows you to control the available inventory displayed on your connected sales channels, even if more is available. You can define a maximum quantity according to your business strategies to limit the amount that can be purchased of a particular item. The channel will receive the specified maximum quantity only if it is lower than the actual available inventory. If the maximum quantity is higher than the inventory in stock, Sellercloud will send the actual quantity. This ensures that the lower of the two values is always sent.

For example, if you have 500 units of a product in stock and the maximum quantity is set to 10, Sellercloud will send 10 available units to the channel. If the available quantity drops to 5 and the maximum quantity is set at 10, a quantity of 5 will be sent to the channel.

Enable Inventory Max Quantity

Inventory Max Quantity can be configured on a company level, which applies a default value across all products for that channel, and on a product level, where you can configure unique values for each item. If you set the option on a product level, it overrides the company setting.

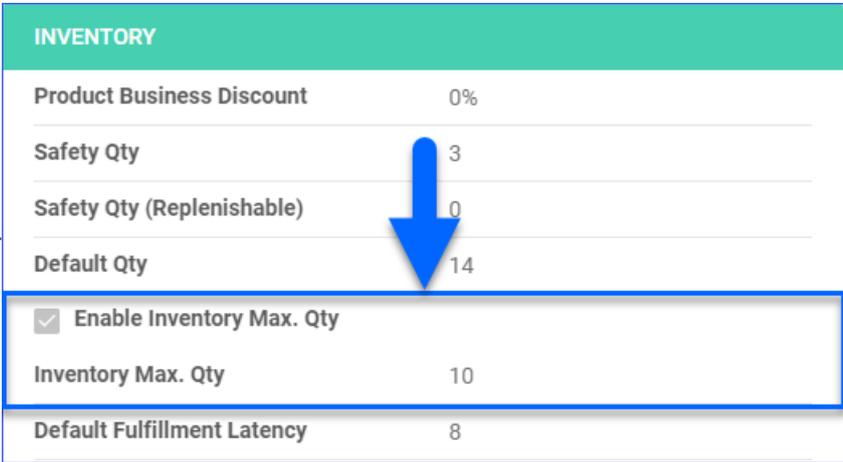

The maximum quantity can be updated individually or [In Bulk](#) using the [Bulk-Update](#) and [Custom Export Columns](#).

Per Company

To configure a default inventory max quantity per company:

1. Go to [Company Settings](#).
2. Select **Toolbox > Channels > Choose a channel > General Settings**.
3. Click **Edit**.
4. In the **Inventory** panel, check the **Enable Inventory Max. Qty** option and fill in the quantity.

5. Click **Save**.

INVENTORY	
Product Business Discount	0%
Safety Qty	3
Safety Qty (Replenishable)	0
Default Qty	14
<input checked="" type="checkbox"/> Enable Inventory Max. Qty	
Inventory Max. Qty	10
Default Fulfillment Latency	8

The value of your products' **MaxQtyUseDefault** column must be set to **True** to use the company's default **Max Qty**.

This negates the need to populate specific values per product. To use a different **Max Qty** than the default one, the value of this column must be **False**, and a **Max Qty** must be specified on a product level.

Per Product

To configure the inventory max quantity per product:

1. Go to the [Product Details](#) page.
2. Click on **Toolbox > Channels > Choose a channel > Channel Properties > Edit**.
3. Check the **Max Qty Enabled** box. If **Default** is checked, it will show the company defaults.

4. Click Save.
