

Replenishable Products

04/30/2025 3:21 pm CDT

Overview

This feature is helpful for SKUs that are consistently restocked or tend to restock quickly. It allows your listings to remain active and prevents you from missing out on potential sales, especially for hot-selling products. Marking products as Replenishable allows you to:

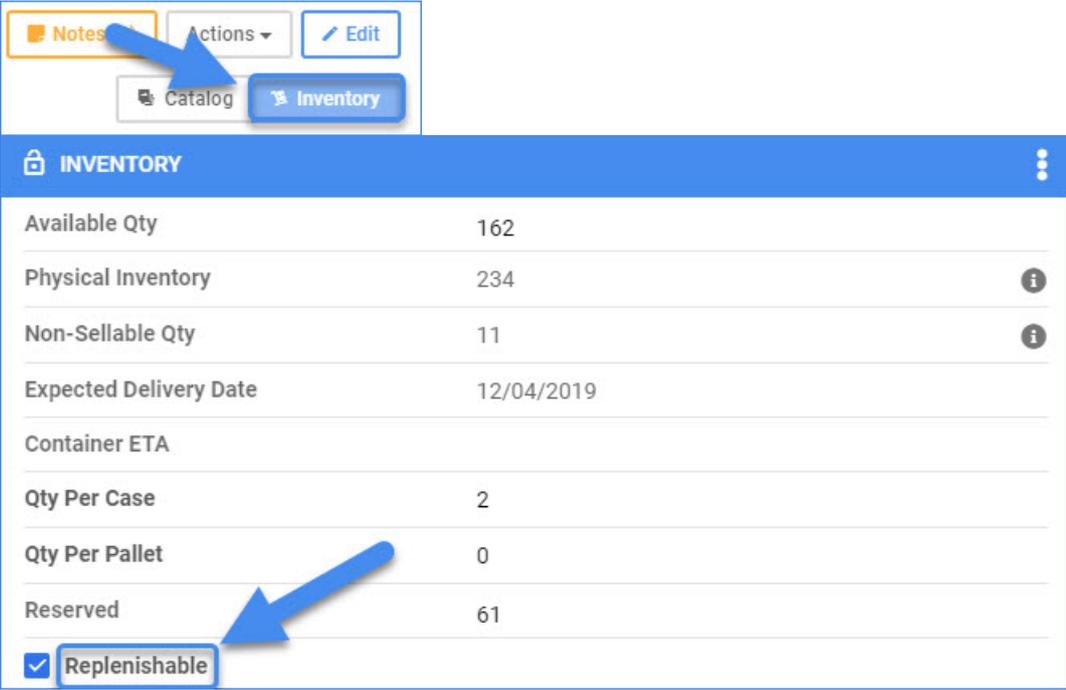

- Sell a specific item regardless of the available quantity
- Ensure available inventory is sent to keep the listings active even if the items are out of stock

Set Products as Replenishable

You can set products as replenishable manually or in bulk.

Manually

Open a product and select **Inventory** > **Edit** > Check **Replenishable** under the **Inventory** panel > **Save**.

The screenshot shows the product management interface. At the top, there are buttons for 'Notes', 'Actions', and 'Edit'. Below these are 'Catalog' and 'Inventory' buttons. The 'Inventory' panel is expanded, showing a table of inventory details. The 'Replenishable' checkbox is checked and highlighted with a blue arrow.

INVENTORY	
Available Qty	162
Physical Inventory	234
Non-Sellable Qty	11
Expected Delivery Date	12/04/2019
Container ETA	
Qty Per Case	2
Qty Per Pallet	0
Reserved	61
<input checked="" type="checkbox"/> Replenishable	

Open a product > Check **Replenishable** > **Save Product**.

In Bulk

You can use a [Bulk Update](#) to update the **Replenishable** field. Use the column header **Replenishable** and the values True or False.

Workflow

1. When updating various channels, Sellercloud sends a fixed quantity for Replenishable products, so it consistently shows a specific available quantity. (The Replenishable status works in correlation with **Default Qty**.)
2. Once the product reaches a **zero** quantity, Sellercloud will send positive inventory to channels. The amount sent will be defined by a field called **Default Qty**.

While some channels have a **Default Qty** field, others (such as eBay and Amazon) will have a different name for **Default Qty**:

- **eBay** will look at the value in the **Fixed Price Quantity** field
 - **Amazon** will use the **Fixed Quantity** setting on the **Amazon Properties** page
 - Other channels will have the field listed as **Default Qty**
3. If **Default Qty** is not specified and inventory quantity reaches 0, Sellercloud will send an inventory of 1 to the channel for products marked as **Replenishable**.

When set to **Replenishable**, the [Safety Quantity](#) is ignored.
