

View Product Inventory

04/30/2025 3:21 pm CDT

Overview

Sellercloud helps you to accurately track inventory across your warehouses. You can search product inventory at each individual warehouse as well as view inventory across multiple warehouses.

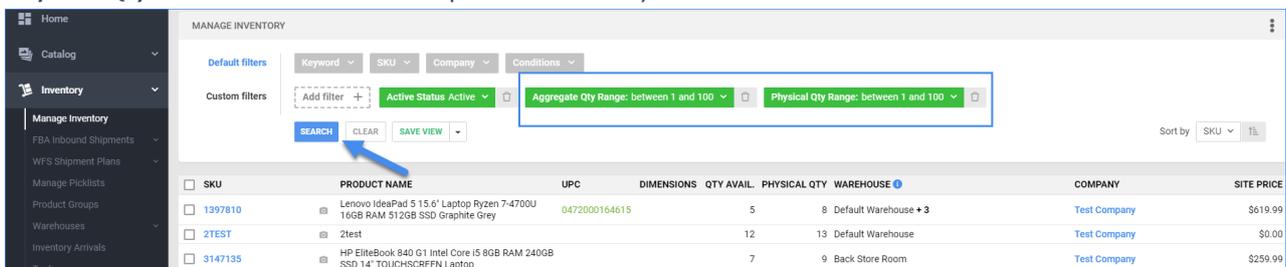

View Product Inventory

You can customize how inventory is displayed on the **Manage Inventory** page based on the selected product type: individual, shadow, or kit.

1. Go to **Inventory > Manage Inventory > Add filter**.
2. Select the warehouse.
3. Select the **Inventory Qty type** and its range.
4. Press **Search**.

View Inventory for a Single SKU

In the results list, you can see the quantity of a regular SKU in the selected warehouses. **Qty Available** column will show the unreserved inventory in the selected warehouses and will be equal to Physical Qty minus Reserves. The **Physical Qty** column will show the total product inventory.

The screenshot shows the 'MANAGE INVENTORY' interface. It includes a sidebar with navigation options like 'Home', 'Catalog', 'Inventory', and 'Manage Inventory'. The main area has search filters for 'Keyword', 'SKU', 'Company', and 'Conditions'. Custom filters include 'Active Status: Active', 'Aggregate Qty Range: between 1 and 100', and 'Physical Qty Range: between 1 and 100'. A 'SEARCH' button is highlighted with a blue arrow. Below the filters is a table with columns: SKU, PRODUCT NAME, UPC, DIMENSIONS, QTY AVAIL, PHYSICAL QTY, WAREHOUSE, COMPANY, and SITE PRICE.

SKU	PRODUCT NAME	UPC	DIMENSIONS	QTY AVAIL	PHYSICAL QTY	WAREHOUSE	COMPANY	SITE PRICE
1397810	Lenovo IdeaPad 5 15.6" Laptop Ryzen 7-4700U 16GB RAM 512GB SSD Graphite Grey	0472000164615		5	8	Default Warehouse + 3	Test Company	\$619.99
2TEST	2test			12	13	Default Warehouse	Test Company	\$0.00
3147135	HP EliteBook 840 G1 Intel Core i5 9GB RAM 240GB SSD 14" TOUCHSCREEN Laptop			7	9	Back Store Room	Test Company	\$259.99

To view a product's warehouse inventory, go to **Inventory > Manage Inventory > Open a product > Toolbox > Warehouse**.

You can select single or multiple products across multiple warehouses and export them: **Inventory > Manage Inventory > Select products > Action menu > Export Products (Inventory)**.

View Inventory for a Shadow SKU

Shadow products share inventory by default. That inventory is combined with all related shadow SKUs. When filtering by Warehouse, as shown below, inventory is displayed individually for each SKU and its respective warehouse.

In the example below, the shadow products **TESTINVE** and **TESTINVE1** are filtered by the warehouses **A11**, **A2**, and **Default Warehouse**. The **Qty Available** column will display the current aggregate quantity only for the related product and its warehouse and will not show the combined inventory in the search results. **Physical Quantity** will display all units physically available in that warehouse (including reserved inventory). Inventory information is

displayed under the **Warehouse** tab of the product details page for each SKU.

SKU	PRODUCT NAME	UPC	DIMENSIONS	QTY AVAIL.	PHYSICAL QTY	WAREHOUSE	SITE PRICE
TESTINVE	TestInventorySKU			10	11	A11	\$0.00
TESTINVE	TestInventorySKU			20	22	A2	\$0.00
TESTINVE	TestInventorySKU			30	33	Default Warehouse	\$0.00
TESTINVE1	TestInventorySKU			110	111	A11	\$0.00
TESTINVE1	TestInventorySKU			220	222	A2	\$0.00
TESTINVE1	TestInventorySKU			330	333	Default Warehouse	\$0.00

For shadow or shadow parents: When filtering by warehouse, the inventory displayed will be for each individual product, similar to how it is displayed under the **Warehouse** tab of each product's details page. The combined inventory among all shadow SKUs will not be shown in this case.

View Inventory for a Kit

If you search by the **Kit Parent**, zero inventory will show for All Component or Main Component kits because the kit parent doesn't have inventory of its own, as its values are based on the inventory of its component.

For this reason, in the example provided below, for the ALL_COMP kit, both **Qty Available** and **Physical Qty** will show as zero.

SKU	PRODUCT NAME	UPC	DIMENSIONS	QTY AVAIL.	PHYSICAL QTY	WAREHOUSE	COMPANY	SITE PRICE
ALL_COMP	all_components_kit			0	0	Warehouse A	Test Company	\$0.00

For Independent kits, you can view the inventory of all of their components.

SKU	PRODUCT NAME	UPC	DIMENSIONS	QTY AVAIL.	PHYSICAL QTY	WAREHOUSE	COMPANY	SITE PRICE
CAMERAK3	CameraKit			3	3	Default Warehouse	Test Company	\$0.00
CAMERAK3	CameraKit			50	50	Test2	Test Company	\$0.00
CAMERATE	Camera test			10	10	Test1	Test Company	\$0.00

Inventory Reports

Inventory Value Reports provide a detailed **inventory** breakdown per product or warehouse. They show the value of your inventory, product aging, unsold inventory, detail the quantity on hand for any given day, and more.

For answers to general questions about using Sellercloud's Financial Reporting Suite, see the [Reports FAQ](#).

View inventory at each warehouse:

1. Inventory > Advanced filter tab
2. Select warehouse from advanced filters.
3. Enter an inventory quantity and press **Search**.

4. **If you do not select a quantity then all products will show, because all products are tagged in each warehouse with a quantity of zero.**
5. Click the **Total Units** hyperlink.
6. Export to a spreadsheet from the action menu.
7. Please note: If you want to determine the exact total value of your inventory, you will need to remove all virtual products, like shadows, from the inventory search.

View product inventory across multiple warehouses:

- Inventory > Select Product > Product Summary page.
View warehouse panel.

View single or multiple product inventories across multiple warehouses and export to Excel:

- Inventory > Select Products > Export Warehouse Inventory from Action Menu.

See [Understanding Inventory Terms](#).
